Internet security

'I've put the right locks on the right doors, so to speak, and now feel confident to use the internet without too much fear of a break-in.'

Just like the real world, the virtual world of the web has a huge and varied population and, inevitably, a number of bad guys reside there. Just as you know to lock your home on leaving it or to keep your bag close to you in a crowd, there are also some simple rules for staying safe online.

Here you will find guides written by, or carefully selected by Digital Unite. Each of our own guides can be printed out for your own reference, or shared with any other people that you are helping.

Identity theft & online safety

Guides to making sure that that your personal information stays private.
