

# What is WordPad?

## Print

WordPad is a Microsoft Windows program that you can use to create documents such as letters, notes and posters. It's less complicated than a full word processor but still lets you perform a range of tasks:

- create, open, and save documents
- format documents – that is, change the size and style of print, the look of a page, etc.
- insert dates, pictures and hyperlinks
- view a document
- change page margins
- print documents.

There are different versions of WordPad in different versions of Windows.
